MERN Stack Developer

Education

- **Chitkara University** — Punjab, India
  Bachelor of Computer Science CGPA: 8.0 — *July 2022 - June 2026*

Skills

- **Programming Languages**: JavaScript, Python, Java, C++, C, SQL
- **Web Development**: React.js, Node.js, Express.js, REST API, HTML5, CSS3
- **Frameworks & Libraries**: Bootstrap, Tailwind CSS, JWT, Redux
- **Cloud & Deployment**: AWS, Vercel, Firebase, Linux, Windows, CI/CD
- **Database Technologies**: MongoDB, PostgreSQL, MySQL, Redis, NoSQL
- **Developer Tools**: Git, GitHub, VS Code, Figma, Postman

Experience

- **Ikarus 3D** — ikarus3d.com
  Software Developer Associate — *March 2025 – Present*
  - **Backend Migration**: Migrated 100% of backend from Firebase to AWS, implementing Amazon Cognito, DynamoDB, and Lambda; reduced latency by 35% and increased scalability.
  - **3D Customizer Platform**: Engineered an interactive 3D customization tool for clients to personalize models with logos, colors, and patterns; improved user engagement by 40% and reduced turnaround time by 50%.
- **The Algorithms** — github.com/TheAlgorithms
  Maintainer — *September 2023 – Present*
  - **Leadership**: Promoted to maintainer role, responsible for reviewing and merging pull requests.
  - **Collaboration**: Worked with global developers to improve and expand the open-source repository.
- **GirlScript Summer of Code** — gssoc.girlscript.tech
  Project Admin & Mentor — *May 2024 – August 2024*
  - **Project - Diabetes Prediction**: ML-based project focusing on diabetes risk assessment and prevention.
  - **Mentoring**: Led 30+ contributors, establishing coding standards and review processes for efficient collaboration.
  - **Impact**: Drove project success with 60+ merged pull requests. Enhanced ML model accuracy by 15% and implemented key features including automated testing and responsive UI.

Projects

- **Money-Mentor** — money-mentor.vercel.ap
  MongoDB, Express.js, React.js, Node.js, AI Integration — *Jan 2024 - Present*
  - **Description**: Money-Mentor is a finance platform to track expenses, integrate bank accounts, monitor investments, and receive AI-powered insights. It uses JWT authentication and MongoDB aggregation for analytics. Optimized with AI-driven insights, query tuning, and real-time updates, enhancing financial decision-making.
- **VS Code Extensions** — 3 Extensions Published (3000+ Total Downloads)
  JavaScript, TypeScript, Node.js, AI, MongoDB — *Jan 2023 - Jun 2023*
  - **JavaSnippet**: Comprehensive Java code templates for data structures, algorithms, and modern Java features.
  - **Auto Reload Backend**: Implemented tool automatically reloading Node.js applications and refreshing browser.
  - **Mongoose to Postman Converter**: Built converter generating Postman-compatible JSON from MongoDB schemas using Google's Generative AI.
- **NPM Packages** — 2 Packages Published (300+ Downloads Monthly)
  JavaScript, React, Node.js, API Integration — *Jun 2023 - Dec 2023*
  - **use-react-summary**: A React hook leveraging Google Generative AI for real-time text summarization.
  - **use-react-GFG**: React hook for fetching and displaying complete Geeks for Geeks user profiles with customizable UI.

Certifications

- The Complete 2023 Web Development Bootcamp - Udemy
- Google Cloud Generative AI Certification - Completed 24 skill badges across all levels

Achievements

- Best Full Stack Project Award - Chitkara University (2023)
- Top 50 Campus Ambassador - GirlScript Summer of Code (2024)
- Ranked 10th among 200+ participants in Innogeeks Open Source Program (2023)
- Ranked 3rd in University for Hacktoberfest Contributions (2023)
- Solved 300+ Coding Challenges on LeetCode, HackerRank, and Coding-Ninjas
